Education

MLR Institute of Technology — Hyderabad, India

B.Tech in Computer Science and Engineering — *Expected 2028*

- CGPA: 9.09 / 10
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Database Management Systems (SQL), Software Engineering, Operating Systems, Web Development

Experience

Job Simulation – Data & Business Analytics — Remote

Deloitte Australia (via Forage) — *2026*

- Completed a virtual job simulation covering forensic technology and data analysis workflows, applying structured techniques to business datasets to surface patterns and risk indicators.
- Translated raw business data into analytical insights using investigative and exploratory data analysis methods, strengthening data interpretation and business-context problem-solving skills.

Digital Tradition Hub — 2026

React.js, Node.js, Express.js, MongoDB Atlas

- Designed and shipped a full-stack MERN platform for discovering and preserving regional festivals and cultural traditions, including user authentication and an admin content-management dashboard.
- Deployed a production build across Vercel (frontend) and Render (backend) with a MongoDB Atlas-backed data layer, managing the full development-to-deployment lifecycle independently.

Projects

Student Online Auction System | *React.js, Node.js, Express.js, MongoDB, Socket.io, JWT* — 2025 – 2026

- Built a full-stack, role-based campus auction platform enabling students to buy and sell items through live bidding, with separate Student and Administrator dashboards.
- Implemented a real-time bidding engine with Socket.io for instant bid updates, plus JWT authentication, bcrypt password hashing, and role-based access control.
- Engineered automated auction closure and highest-bidder selection logic, virtual wallet management, and transaction history, following a RESTful API architecture.

COVID-19 Analytics Dashboard | *Python, Streamlit, Next.js, TypeScript* — 2026

- Built an end-to-end analytics platform examining global COVID-19 trends from Jan – Jul 2020, pairing an interactive Streamlit dashboard with a Next.js narrative storytelling site.
- Developed six analytical visualizations (growth trends, daily cases, country comparisons, recovery rates) and three animated visualizations tracking shifting country rankings over time.
- Deployed the dashboard on Render and the storytelling site on Vercel, applying data-storytelling principles to make pandemic data accessible to a non-technical audience.

Life Goals Visualization App | *Figma, UI/UX Prototyping* — 2026

- Designed a high-fidelity, interactive prototype for a personal-goal-tracking app spanning fitness, career, travel, and personal growth dashboards, from user-flow mapping through final screens.
- Built a consistent visual language and component system in Figma, prioritizing accessibility and data visualization for user motivation and accountability.

Technical Skills

Languages: Java, Python, SQL, JavaScript, TypeScript, C, HTML/CSS
Frameworks & Tools: React.js, Next.js, Node.js, Express.js, Angular, Socket.io, Tailwind CSS, JWT, REST APIs, Git, GitHub
Data & Visualization: Pandas, NumPy, Matplotlib, Plotly, Streamlit, MongoDB
Design: Figma, UI/UX Prototyping, Wireframing

Honors & Certifications

Winner – Data Analytics Workshop Carnival 2.0, MLR Institute of Technology
TCS iON Career Edge – Young Professional, TCS iON — Jun 2026
